Outdoor

We are excited to announce the launch of **Handicare's Minivator 2000 (twin rail) outdoor custom stairlift!**

The Minivator 2000 has become a firm favourite with our dealers over the years due to its versatility, large number of options and overall great value.

#### What makes it ideal for outdoor use?

- Rail sections are zinc plated and also powder coated in RAL7004 (Signal Grey) for extra protection.
- The main PCB, switches and other electrical components are all weatherproofed as per our 1000 outdoor lift.
- We have been testing a unit for the past six months in typically damp British winter weather which has also been a lot colder than usual at times. It has endured sleet, snow, hail, rain and sunshine. Number of times it stopped working? Zero.
- The unit was also tested in an environmental chamber to British and European standards (BS EN 60068-2-11/60068-2-1/60068-2-2). This included many hours in a salt mist meaning it can also be used in coastal areas.

#### What options does it have?

All current bend options and configurations are available plus both powered swivel and powered footplate (from seat only). It will be supplied with the Smart Seat (slate grey cushions) which will soon become the standard seat on the 1000 Outdoor lift.
